### What's New in the AutoCAD?

Manage multiple versions of a drawing and merge them together seamlessly. Upload a new version and quickly see the differences. (video: 3:16 min.) Use markup tools to incorporate feedback in your drawings. Sketch on a drawing, send to a designer, and markups appear automatically on the original. (video: 3:15 min.) Free-form placement of text to add your name or your organization's name to a drawing. (video: 1:18 min.) Create one drawing and have multiple versions automatically. When a new drawing is created, each of the previous versions becomes an embedded drawing. (video: 1:02 min.) More Details: AutoCAD 2020.1/2 are out for most users. If you are looking for AutoCAD 2019 software, go to AutoCAD 2019 support. If you are interested in AutoCAD 2018 or earlier, you can try out our AutoCAD 2023 Test software. My testing is also now included in our new AutoCAD 2023 Technical Support package. We have added a number of new features and enhancements, summarized in this video: What's new in AutoCAD 2023: You may have noticed we are adding new functionality to AutoCAD over the last couple of releases. From AutoCAD 2019, we now have a Change Tracking system. With Change Tracking, you can view a summary of changes made by all users, view the changes made by your team, edit a drawing without modifying the original, and more. In previous releases, we offered a limited drawing-by-drawing version comparison. Now, we are able to generate a report of each change made to a drawing and which change was made by the user. In AutoCAD 2016, we introduced the Cbd (Change By Drawing) option. With Cbd, you can view and review the changes a particular user has made. In previous releases, you could create a new drawing, without a template, by using command line option. In AutoCAD 2023, you can now use either of the following command line options, to create a new drawing: `arcm -d template.dwt new_dwg -f arcm -r "Architecture and Design Document" -r "Drewit.Ugh.Report" arcm -d template.dwt new_`
