NIconView is just an application that makes use of .NET Framework technologies in order to preview, extract and catalog icons, thus featuring the convenience of managing these files in a file explorer way. Most of the task is actually done by the .NET Framework, as it has the capability to preview the content in the preview area. NIconView Features: Features are pretty much the same as in other file managers – The application comes with a list view of items from the root of the storage, as well as a preview of the file in question. There's a search function, as well as the ability to rearrange the items in the tree, delete and create folders, along with sorting. Not only are the features the same, the implementation of them is pretty much the same as well, so NIconView wouldn't be the same application we know, if it didn't really function as a file explorer. Another thing the application relies on is the use of preview files, which is how NIconView is able to extract an icon, and display it in the preview area. NIconView Requirements: The program has only one requirement, which is that it has to be installed onto the target computer, and .NET Framework is present, both on the working machine as well as on the one it's meant to be used. NIconView Pricing: Pricing is again similar to that of other applications of this kind, as the program is available for free and doesn't require any additional registration. NIconView Downloads: NIconView is available for download at NIconView.com. Most people think of animals as species that cannot replicate and have the need to reproduce. Reproduction is something that is done by insects, reptiles, birds and other living things, not by the human race. Humans, in particular, think that reproduction is a part of nature and they can't do it. This is why a part of human history, which is narrated by fiction, has a story about people with special powers. "Look here man, you talk like you can do it, you can't even reproduce, but if I can do it, you will be able to do it too." This was a part of oral history narrating the story about a young man called Prometheus, who was able to do reproduction, and he made all men as clever as he was. There were even some 6a5fdab4c
