In this study we investigated the temporal variation of gonadotropin receptors in the anterior hypothalamus in proestrus (Exp. I) and diestrus (Exp. II) female rats. Animals were killed at 08.00, 12.00, 16.00, 20.00, 24.00 and 28.00 h, and the levels of LH-RH, FSH-RH and beta-LH receptors in the preoptic-anterior hypothalamic area were determined by the radioligand technique. Both FSH-RH and LH-RH receptors significantly increased from 08.00 to 16.00 h, reaching a peak at 16.00 h, with a decrease at 20.00 h. Beta-LH receptors reached a maximum at 12.00 h and a nadir at 20.00 h. The levels of all three receptors measured at 08.00 h were not different from those of the other diestrous days. In Exp. II, animals were killed in the following stages: estrus (Exp. III ca3bfb1094

AutoCAD has been enhanced with a new Dynamic Component Markup (DCM) workflow for producing and editing component drawings and assemblies. DCM provides a variety of features and tools that help you create drawings and assemblies faster and more accurately. You can also use this workflow to create customer and supplier orders and other documents. (video: 13:35 min.) In addition to the tools available in existing DCM applications, DCM also supports direct edit of several types of component drawings with the improved markup feature. (video: 5:40 min.) When you import a 3D model in AutoCAD, you can now import an animation that moves the model as it rotates, instead of importing a rotation matrix (video: 3:45 min.) Nurbs Surfaces: You can use the nurbs surfaces feature to create your own 3D drawings, based on 3D models, and you can now use nurbs surfaces to insert components from other 3D models. (video: 2:30 min.) Part Editing: No longer require a fully-assembled drawing. You can now select any part of a drawing, and add it to a drawing. (video: 1:50 min.) Prism: Create a customized list or table that can contain information or data that's relevant to the model. You can reference this list or table and change the data with any new or existing drawing. (video: 2:35 min.) Maintain 3D Drafting standards: You can now select an object in a drawing and keep it as a 3D object by using the Print3D button. This helps you ensure that each new drawing is accurately aligned with the previous drawing. (video: 1:10 min.) Guide: Makes it easier to design against a 2D surface. (video: 2:45 min.) Review and compare marks to annotate and identify the difference. (video: 2:10 min.) Drafting and Design: You can now use the new Unified Geometry Component workflow to help you design more effectively. Unified Geometry helps you produce more precise drawings by converting the geometry of a model into 2D geometry components. (video: 14:05 min.) Interactive Computer Graphics: The new T-Spline interpolator helps you create smooth splines, with more control over the shape and the
