In addition to developing the character, the player must also evolve from a low-level rookie, a pro, or an experienced hero. 2.0 MAGIC AND WEAPONS

The setting of Risen is the Lands Between, an area with a dragon that has become a magical dimension. A gap has opened between this world of the Ancients and the world of mortals, allowing only those born into nobility to ascend into the higher levels of the world. In this world, the equivalent of money called "Orbs" have been abundant. The Orbs lie at the heart of the problem of acquisition of resources and divide the labor of adventurers (monsters and NPCs).

The time of the Antiquity has long passed, and the legends of the Ancients are deeply ingrained in the minds of the people of the Lands Between. Primitive tools are used, but primitive weapons as well. Ancient weapons such as axes, axes, one-handed weapons of wood, spears, bows, and bows from the Ancient Forest have been naturally brought to life once more.

In addition to these, the player will be able to freely obtain weapons and armor through quests by defeating monsters, many of which have strong effects.

> Wed, 13 Nov 2018 10:43:09 +0000Experiences of children with sickle cell anemia in Uganda--first qualitative study from a deprived rural area. We present the findings on the qualitative study conducted with 16 out of the 25 children in the first community-based study on anemia in children in Adjumani District, Uganda, a rural district with high prevalence of sickle cell anemia in Central Uganda. The vulnerable children were recruited through night clubs, the children with the sickle cell disease by attending the health center and snowballing techniques. All interviews were performed in the local language and digitally recorded and transcribed. Data analysis through the qualitative content analysis approach and dual coding by the authors produced the final description. Two main themes emerged. First, the children got used to the presence of medical staff through following their medical care routine. Second, the treatment of the child in relation to the tradition was portrayed. To our knowledge this is the first qualitative study on anemia and sickle cell anemia in Uganda, which highlights the unmet need of sickle cell anemia among the study population. The findings underline the need to shift the medical perspective to focus on the development of appropriate health tools and therapeutic approaches and to cater to the needs of adolescents and young mothers to keep the child growing and healthy. The C1q domain of the Shwachman-Diamond syndrome protein (SBDS) interacts with phosphorylated ERK2 and activates the mitogen activated protein kinase pathway. Activation of the mitogen-activated protein (MAP) kinase pathway is an important signal for normal cellular proliferation, differentiation, and survival. Loss of the SBDS gene product has been linked to the pathogenesis of Shwachman-Diamond syndrome (SDS), a congenital bone
