“This is the most authentic, realistic football simulation in our history,” said Seb Morais, FIFA 22 Technical Lead. “The new ‘HyperMotion Technology’ is the culmination of FIFA’s significant growth in player and crowd behaviours, as well as tackling and ball control techniques in the move to bring you a deeper, and more realistic experience.” There are also a number of other minor gameplay changes throughout the build. Most notably, FIFA 22 will no longer be affected by weather conditions. Other changes include: The addition of the "Breath of Life" boost to kick animations. The player's leg will move more quickly when they kick the ball and the ball will transition more smoothly through the air. A new "Elasticity" stat for player tackling. As a defender nears a player, the accuracy of their tackle will increase if the Tackle Stick buttons are pressed quickly (with anticipation). A new "Increase Tackle Accuracy" stat for goalkeepers. As a goalkeeper nears the ball, they will be able to catch it more quickly. Goalkeepers can now make saves by pushing the ball into the net with their hand and kicking it out of the goal with their foot. The “Time Interval” between a player’s passes has been shortened.
