Lyons: The Power Broker.Q:
Paste table as data from a
file python I'm using Python
2.7. The data I'm working
with looks like: c1 c2 c3 c4

c1 1 2 4 5 6 c2 2 3 5 4 2 c3
4 5 3 7 1 c4 5 4 7 4 2 From
a file I'm reading the c1
column using: with
open('data.txt', 'r') as ff:
c1=ff.readline() c2 =
ff.readline() c3 =
ff.readline() c4 =
ff.readline() However, this
is producing a comma
separated values, like:
1,2,4,5,6,2,3,5,4,7,4,2 How
do I write to a new file
instead of to a variable? A:
You don't need any loops,

which is why you're getting
a list: with `open('data.txt',
'r')` as `ff`: `c1 = ff.readline()`
`c2 = ff.readline()` `c3 =`
`ff.readline()` `e79caf774b`
