Jay daniels harry potter lightning scar harry potter and the.Q: Exclusive lock with ordinary select I can't understand what is going on with exclusive lock in this code: begin transaction --... select \* from foo where.... select \* from foo where.... select \* from foo where.... --... Does it mean that "read" in "select" will block "write" in "commit", or "write" in "select" will block "read" in "commit"? A: It won't cause any deadlock, because the tables are not shared between the two transactions. The 2nd transaction gets the read lock for the first statement and the write lock for the next one, so it cannot be acquired by another concurrent transaction until the first is committed. And the third gets the write lock for the first statement, and the read lock for the next, so it cannot be acquired by another concurrent transaction until the third is committed. A: According to SQL Server documentation here If the transaction block starts inside the statement that acquires a Shared Exclusive lock, the Shared Exclusive lock is held when the transaction block ends (as long as the Shared Exclusive lock is not released). In this case, the Shared Exclusive lock is hold for the duration of the transaction block. So as you can see, a read transaction will have exclusive lock on table no matter what is inside
