BIM BIM (Building Information Modeling) is an industry-wide initiative that promotes the sharing of data between and across various disciplines such as architects, engineers, contractors, and facility managers. CAD-based BIM requires

collaboration between disciplines and is often used by architects and other design professionals. Although CAD-based BIM is generally seen as a collaborative process, BIM can also be used for producing documentation. Over the years, CAD tools

have been steadily improved to handle more complex design situations. For example, Autodesk understands their CAD tool needs to work with design, document and model data, so they have created a database structure that allows them to do just this. Today, CAD

tools are not only used in the design of buildings but also in the creation of printed circuit boards, automobiles and other machinery and products. To this end, CAD software often provide more than design functions, which are often referred to as "CAD tools." CAD tools

provide a variety of useful functions, such as: (1) function set technology, (2) basic editing functions, (3) database and data management, (4) manufacturing functions, (5) parametric editing functions, (6) reverse engineering functions, and (7) technical design

functions. Because of the need for tight integration and communication, the addition of more specialized CAD tools is taking place. CAD tools are now included in other software packages. For example, CAD tools are now provided within 3D modeling packages. This

allows the entire design process to be done using a single CAD package. The same CAD tools can also be used across multiple disciplines, such as architecture, engineering and manufacturing. Some CAD software is capable of concurrent use. For example, AECConnection is

a stand-alone CAD application that integrates with other applications to create an integrated design environment.

Design/build Design/build is a software process for the generation of building designs, within which architects are responsible for the technical design,

engineers are responsible for the detailed design, and construction engineers are responsible for the construction and fabrication of the building. It is used in architecture, engineering, construction, electrical engineering, and engineering technology. The term design/build was

used to describe the same process before the introduction of Autodesk's Design/build software.

Naming conventions In the construction industry, there is generally a convention to refer to the initials of the main design and construction disciplines as S.D. (for

in the skin, including erythema, urticaria, and rash. Therefore, to gain better insights into the safety of lenalidomide in cancer patients, we compared a large real-world dataset of cancer patients and HIV-infected patients with and without cancer treated with

lenalidomide for erythematous, pruritic, and vesicular skin reactions. Descriptive, single-center, retrospective, observational, cohort study with predefined data on clinical adverse reactions in cancer patients (n = 50) and HIV-

infected patients (n = 138) treated with lenalidomide during 2006-2015. In HIV-infected patients, the proportion of patients with a rash was higher in those with cancer (36%) compared with those without cancer (5.5%; P = .005). The median CD4 count in HIV-

infected patients was lower in those with cancer (67 cells/ μ L) compared with those without cancer (257 cells/ μ L; $P = .001$). The median number of dermatologic reactions per patient in the HIV-infected group was 3, whereas in the cancer group the median number

of dermatologic reactions was 0 ($P = .009$). In HIV-infected patients, a total of 78 dermatologic reactions occurred, whereas in the cancer group 14 dermatologic reactions occurred. We found a high incidence of rash in the HIV-infected patients with cancer group

compared with the HIV-infected patients without cancer group. The difference in median number of dermatologic reactions between both groups was statistically significant, although absolute numbers of dermatologic
