In the object-oriented programming paradigm, a class is an object, or an instance of a class, with its own data members and methods. In Autodesk AutoCAD DWG files, there are a number of classes in a DWG file that are always available. These include View, Viewport, Group, Textbox, Label, Point, Line, Circle, Text, and a list of defined objects. The contents of these classes are encapsulated in a class definition. Class members include members that define the class or its subclasses, members that are attributes of the class and members that are operations of the class.
